

CHALLENGE

Hackers, viruses, SPAM, SCAM (fake emails that use social engineering techniques to steal confidential information) and recreational Internet usage during working hours (chat, music download, access to pornographic sites, etc.) are some of the threats to productivity and safety of your data.

SOLUTION

The BRMA® is a UTM (Unified Threat Management) which brings together more than 20 features to ensure productive and safe usage of the Internet in corporate computing environments of all sizes and segment.

The solution allows you to set policies for use by users, groups and objects (device, protocol, address, URL, service and time).

ADVANTAGE

- Protection against virtual pests attacks
- Internet access optimization
- Increase employee productivity
- Cost reduction

RESOURCES

Web interface of easy management	Access from any machine, just have a browser
